1.5 Pin Definition

Pin Number	Symbol	I/O	Function						
Power Suppl	Power Supply								
21	VDD	Р	Power Supply for Logic Circuit This is a voltage supply pin. It must be connected to external source.						
30	VSS	Р	round of OEL System This is a ground pin. It also acts as a reference for the logic pins, the OEL driving voltages, and the analog circuits. It must be connected to external ground.						
2	VCC	Р	Power Supply for OEL Panel This is the most positive voltage supply pin of the chip. It must be supplied externally.						
Driver									
4	IREF	I	Current Reference for Brightness Adjustment This pin is segment current reference pin. A resistor should be connected between this pin and V_{SS} . Set the current at $10\mu\text{A}$.						
3	VCOMH	0	Voltage Output High Level for COM Signal This pin is the input pin for the voltage output high level for COM signals. A capacitor should be connected between this pin and V_{SS} .						
Interface									
20 19	BS1 BS2	I	Communicating Protocol Select These pins are MCU interface selection input. See the following table: BS1 BS2 I^2C 1 0 4-wire Serial 0 0 8-bit 68XX Parallel 0 1 8-bit 80XX Parallel 1 1						
16	RES#	I	Power Reset for Controller and Driver This pin is reset signal input. When the pin is low, initialization of the chip is executed. Keep this pin pull high during normal operation.						
17	CS#	I	Chip Select This pin is the chip select input. The chip is enabled for MCU communication only when CS# is pulled low.						
15	D/C#	I	Data/Command Control This pin is Data/Command control pin. When the pin is pulled high, the input at D7∼D0 will be interpreted as display data. When the pin is pulled low, the input at D7∼D0 will be transferred to the command register. When the pin is pulled high and serial interface mode is selected, the data at SDIN will be interpreted as data. When it is pulled low, the data at SDIN will be transferred to the command register. In I²C mode, this pin acts as SA0 for slave address selection. For detail relationship to MCU interface signals, please refer to the Timing						
13	E/RD#	I	Characteristics Diagrams. Read/Write Enable or Read This pin is MCU interface input. When interfacing to a 68XX-series microprocessor, this pin will be used as the Enable (E) signal. Read/write operation is initiated when this pin is pulled high and the CS# is pulled low. When connecting to an 80XX-microprocessor, this pin receives the Read (RD#) signal. Data read operation is initiated when this pin is pulled low and CS# is pulled low. When serial or I²C mode is selected, this pin must be connected to V _{SS} .						
14	R/W#	I	Read/Write Select or Write This pin is MCU interface input. When interfacing to a 68XX-series microprocessor, this pin will be used as Read/Write (R/W#) selection input. Pull this pin to "High" for read mode and pull it to "Low" for write mode. When 80XX interface mode is selected, this pin will be the Write (WR#) input. Data write operation is initiated when this pin is pulled low and the CS# is pulled low. When serial or I²C mode is selected, this pin must be connected to Vss.						
5~12	D0~D7	I/O	Host Data Input/Output Bus These pins are 8-bit bi-directional data bus to be connected to the microprocessor's data bus. When serial mode is selected, D1 will be the serial data input SDIN and D0 will be the serial clock input SCLK. When I²C mode is selected, D2, D1 should be tired together and serve as SDA _{OUT} , SDA _{IN} in application and D0 is the serial clock input, SCL. Unused pins must be connected to V _{SS} except for D2 in serial mode.						

WiseChip Semiconductor Inc.

1.5 Pin Definition (Continued)

Pin Number	Symbol	I/O	Function				
Reserve							
18, 22~29	N.C.	-	Reserved Pin The N.C. pins between function pins are reserved for compatible and flexible design.				
1, 31	N.C. (GND)		Reserved Pin (Supporting Pin) The supporting pins can reduce the influences from stresses on the function pins. These pins must be connected to external ground as the ESD protection circuit.				

WiseChip Semiconductor Inc.

MCU Interface Selection

: Base on BS1 and BS2 connection.

Pins connected to MCU interface : CS#, RES#, D/C#, R/W#, E/RD#, and D0~D7

Showed as below table:

BS2	BS1	Interface	Data bus					Control bus							
D32		mode	D7	D6	D5	D4	D3	D2	D1	D0	CS#	D/C#	R/W#	E/RD#	RES#
0	0	Serial	0	0	0	0	0	NC	SID	SCLK	CS#	D/C#	0	0	RES#
0	1	I^2C	0	0	0	0	0	SDA _{OUT}	SDA _{IN}	SCL	0	SA0	0	0	RES#
1	0	8bit 6800	D7	D6	D5	D4	D3	D2	D1	D0	CS#	D/C#	R/W#	Е	RES#
1	1	8bit 8080	D7	D6	D5	D4	D3	D2	D1	D0	CS#	D/C#	WR#	RD#	RES#

- " 0 " is connected to VSS.
- "1" is connected to VDD.
- " NC " is non-connected.
- When I²C mode is selected, SDA and SCL need connected a pull up resistor to VDD. Showed as the below Figure.

Global LCD Panel Exchange Center

Doc. No: SAS1-090AV-B

2. Absolute Maximum Ratings

Parameter	Symbol	Min	Max	Unit	Notes
Supply Voltage for Logic	V_{DD}	-0.3	4	V	1, 2
Supply Voltage for Display	V_{CC}	0	15	V	1, 2
Operating Temperature	T_OP	-40	85	°C	3
Storage Temperature	T_{STG}	-40	90	°C	3
Life Time (80 cd/m²)		150,000	-	hour	4
Life Time (60 cd/m²)		200,000	-	hour	4

Note 1: All the above voltages are on the basis of " $V_{SS} = 0V$ ".

- Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 3. "Optics & Electrical Characteristics". If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate.
- Note 3: The defined temperature ranges do not include the polarizer. The maximum withstood temperature of the polarizer should be 80°C.
- Note 4: $V_{CC} = 13.0V$, $T_a = 25$ °C, 50% Checkerboard. Software configuration follows Section 4.4 Initialization.

End of lifetime is specified as 50% of initial brightness reached. The average operating lifetime at room temperature is estimated by the accelerated operation at high temperature conditions.

WiseChip Semiconductor Inc.

3. Optics & Electrical Characteristics

3.1 Optics Characteristics

Global LCD Panel Exchange Center

Characteristics	Symbol	Conditions	Min	Тур	Max	Unit
Brightness	L _{br}	Note 5	60	80	-	cd/m ²
C.I.E. (Yellow)	(x) (y)	C.I.E. 1931	0.46 0.45	0.50 0.49	0.54 0.53	
Dark Room Contrast	CR		-	>10,000:1	-	
Viewing Angle			-	Free	- /	degree

^{*} Optical measurement taken at $V_{DD} = 2.8V$, $V_{CC} = 13.0V$. Software configuration follows Section 4.4 Initialization.

3.2 DC Characteristics

Characteristics	Symbol	Conditions	Min	Тур	Max	Unit
Supply Voltage for Logic	V_{DD}		1.65	2.8	3.3	V
Supply Voltage for Display	V_{CC}	Note 5	12.5	13.0	13.5	V
High Level Input	V_{IH}	$I_{OUT} = 100 \mu A, 3.3 MHz$	0.8×V _{DD}	_	V_{DD}	V
Low Level Input	V _{IL}	$I_{OUT} = 100 \mu A, 3.3 MHz$	0	_	0.2×V _{DD}	V
High Level Output	V _{OH}	$I_{OUT} = 100 \mu A, 3.3 MHz$	0.9×V _{DD}	_	V_{DD}	V
Low Level Output	V _{OL}	$I_{OUT} = 100 \mu A, 3.3 MHz$	0	_	0.1×V _{DD}	V
Operating Current for V _{DD}	I_{DD}		-	180	300	μΑ
		Note 6	-	16.0	20.0	mA
Operating Current for V _{CC}	I_{CC}	Note 7	-	23.3	29.1	mA
		Note 8	-	36.2	45.3	mA
Sleep Mode Current for V _{DD}	I _{DD} , SLEEP		-	1	5	μΑ
Sleep Mode Current for V _{CC}	I _{CC, SLEEP}		-	2	10	μΑ

Note 5: Brightness (L_{br}) and Supply Voltage for Display (V_{CC}) are subject to the change of the panel characteristics and the customer's request.

Note 6: V_{DD} = 2.8V, V_{CC} = 13.0V, 30% Display Area Turn on.

Note 7: $V_{DD} = 2.8V$, $V_{CC} = 13.0V$, 50% Display Area Turn on.

Note 8: V_{DD} = 2.8V, V_{CC} = 13.0V, 100% Display Area Turn on.

^{*} Software configuration follows Section 4.4 Initialization.

3.3 AC Characteristics

3.3.1 68XX-Series MPU Parallel Interface Timing Characteristics:

Symbol	Description	Min	Max	Unit
t _{cycle}	Clock Cycle Time	300	-	ns
t _{AS}	Address Setup Time	20	-	ns
t _{AH}	Address Hold Time	0	-	ns
t_{DW}	Data Write Time	80	-	ns
t _{DSW}	Write Data Setup Time	40	- /	ns
t_{DHW}	Write Data Hold Time	20	<i></i>	ns
$t_{\mathtt{DHR}}$	Read Data Hold Time	20		ns
t _{OH}	Output Disable Time	-	70	ns
t _{ACC}	Access Time	-	140	ns
DW	Chip Select Low Pulse Width (Read)	120		nc
PW _{CSL}	Chip Select Low Pulse width (Write)	60	_	ns
DVA	Chip Select High Pulse Width (Read)	60		20
PW _{CSH}	Chip Select High Pulse Width (Write)	60	_	ns
t _R	Rise Time	-	40	ns
t _F	Fall Time	-	40	ns

^{*} $(V_{DD} - V_{SS} = 1.65V \text{ to } 3.3V, T_a = 25^{\circ}C)$

WiseChip Semiconductor Inc.

3.3.2 80XX-Series MPU Parallel Interface Timing Characteristics:

Symbol	Description	Min	Max	Unit
t _{cycle}	Clock Cycle Time	300	-	ns
t _{AS}	Address Setup Time	20	-	ns
t _{AH}	Address Hold Time	0	-	ns
t _{DW}	Data Write Time	70	_	ns
t _{DSW}	Write Data Setup Time	40	_	ns
t _{DHW}	Write Data Hold Time	15	- /	ns
t _{DHR}	Read Data Hold Time	20	A	ns
t _{OH}	Output Disable Time	-	70	ns
t _{ACC}	Access Time	-	140	ns
t _{PWLR}	Read Low Time	120	_	ns
t _{PWLW}	Write Low Time	60	_	ns
t _{PWHR}	Read High Time	60	-	ns
t _{PWHW}	Write High Time	60	_	ns
t _{CS}	Chip Select Setup Time	0	-	ns
t _{CSH}	Chip Select Hold Time to Read Signal	0	-	ns
t _{CSF}	Chip Select Hold Time	20	-	ns
t _R	Rise Time	-	40	ns
t _F	Fall Time	_	40	ns

^{*} $(V_{DD} - V_{SS} = 1.65V \text{ to } 3.5V, T_a = 25^{\circ}C)$

(Write Timing)

WiseChip Semiconductor Inc.

3.3.3 Serial Interface Timing Characteristics:

Symbol	Description	Min	Max	Unit
t _{cycle}	Clock Cycle Time	100	-	ns
t _{AS}	Address Setup Time	15	-	ns
t _{AH}	Address Hold Time	15	-	ns
t _{CSS}	Chip Select Setup Time	20	-	ns
t _{CSH}	Chip Select Hold Time	50	-	ns
t_{DW}	Data Write Time	55	-	ns
t _{DSW}	Write Data Setup Time	15	<i></i>	ns
t_{DHW}	Write Data Hold Time	15		ns
t _{CLKL}	Clock Low Time	50	-	ns
t _{CLKH}	Clock High Time	50	_	ns
t _R	Rise Time	-	40	ns
t _F	Fall Time	→ -	40	ns

^{*} $(V_{DD} - V_{SS} = 1.65V \text{ to } 3.5V, T_a = 25^{\circ}C)$

WiseChip Semiconductor Inc.

3.3.4 $\ensuremath{\mathrm{I^2C}}$ Interface Timing Characteristics:

Symbol	Description	Min	Max	Unit
t _{cycle}	Clock Cycle Time	2.5	-	μs
t _{HSTART}	Start Condition Hold Time	0.6	-	μs
+	Data Hold Time (for "SDA _{OUT} " Pin)	0		nc
t _{HD} Data Hold Time (for "SDA _{IN} " Pin)		300	-	ns
t_{SD}	Data Setup Time 100 -		ns	
t _{SSTART}	t _{SSTART} Start Condition Setup Time (Only relevant for a repeated Start condition) 0.6		- (μs
t _{SSTOP} Stop Condition Setup Time 0.6 -		μs		
t _R	t _R Rise Time for Data and Clock Pin		300	ns
t _F	t _F Fall Time for Data and Clock Pin		300	ns
t_{IDLE}	Idle Time before a New Transmission can Start		-	μs

^{*} $(V_{DD} - V_{SS} = 1.65V \text{ to } 3.5V, T_a = 25^{\circ}C)$

WiseChip Semiconductor Inc.

4. Functional Specification

4.1 Commands

Refer to the Technical Manual for the SSD1309

4.2 Power down and Power up Sequence

To protect OEL panel and extend the panel life time, the driver IC power up/down routine should include a delay period between high voltage and low voltage power sources during turn on/off. It gives the OEL panel enough time to complete the action of charge and discharge before/after the operation.

4.2.1 Power up Sequence:

- 1. Power up V_{DD}
- 2. Send Display off command
- 3. Initialization
- 4. Clear Screen
- 5. Power up V_{CC}
- 6. Delay 100ms (When V_{CC} is stable)
- 7. Send Display on command

- 1. Send Display off command
- 2. Power down V_{CC}
- Delay 100ms
 (When V_{CC} is reach 0 and panel is completely discharges)
- 4. Power down V_{DD}

V_{DD} on V_{CC} on Display on V_{SS}/Ground

Note 9:

- 1) Since an ESD protection circuit is connected between V_{DD} and V_{CC} inside the driver IC, V_{CC} becomes lower than V_{DD} whenever V_{DD} is ON and V_{CC} is OFF.
- 2) V_{CC} should be kept float (disable) when it is OFF.
- 3) Power Pins (V_{DD}, V_{CC}) can never be pulled to ground under any circumstance.
- 4) V_{DD} should not be power down before V_{CC} power down.

4.3 Reset Circuit

When RES# input is low, the chip is initialized with the following status:

- 1. Display is OFF
- 2. 128×64 Display Mode
- 3. Normal segment and display data column and row address mapping (SEG0 mapped to column address 00h and COM0 mapped to row address 00h)
- 4. Shift register data clear in serial interface
- 5. Display start line is set at display RAM address 0
- 6. Column address counter is set at 0
- 7. Normal scan direction of the COM outputs
- 8. Contrast control register is set at 7Fh
- 9. Normal display mode (Equivalent to A4h command)

Global LCD Panel Exchange Center

WiseChip Semiconductor Inc.

4.4 Actual Application Example

Command usage and explanation of an actual example

<Power up Sequence>

If the noise is accidentally occurred at the displaying window during the operation, please reset the display in order to recover the display function.

<Power down Sequence>

Global LCD Panel Exchange Center

WiseChip Semiconductor Inc.

Doc. No: SAS1-090AV-B

<Entering Sleep Mode>

<Exiting Sleep Mode>

5. Reliability

5.1 Contents of Reliability Tests

Item	Conditions	Criteria
High Temperature Operation	85°C, 500 hrs	
Low Temperature Operation	-40°C, 500 hrs	
High Temperature Storage	90°C, 500 hrs	The operational
Low Temperature Storage	-40°C, 500 hrs	functions work.
High Temperature/Humidity Operation	60°C, 90% RH, 240 hrs	
Thermal Shock	-40°C ⇔ 85°C, 100 cycles 30 mins dwell	

^{*} The samples used for the above tests do not include polarizer.

5.2 Failure Check Standard

After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at 23±5°C; 55±15% RH.

^{*} No moisture condensation is observed during tests.

WiseChip Semiconductor Inc.

6. Outgoing Quality Control Specifications

6.1 Environment Required

Customer's test & measurement are required to be conducted under the following conditions:

Temperature: $23 \pm 5^{\circ}\text{C}$ Humidity: $55 \pm 15\%$ RH Fluorescent Lamp: 30W

Distance between the Panel & Lamp: ≥ 50cm

Distance between the Panel & Eyes of the Inspector: ≥ 30cm

Finger glove (or finger cover) must be worn by the inspector.

Inspection table or jig must be anti-electrostatic.

6.2 Sampling Plan

Level II, Normal Inspection, Single Sampling, MIL-STD-105E

6.3 Criteria & Acceptable Quality Level

Partition	AQL	Definition
Major	0.65	Defects in Pattern Check (Display On)
Minor	1.0	Defects in Cosmetic Check (Display Off)

6.3.1 Cosmetic Check (Display Off) in Non-Active Area

Check Item	Classification	Criteria
Panel General Chipping	Minor	X > 6 mm (Along with Edge) Y > 1 mm (Perpendicular to edge)

WiseChip Semiconductor Inc.

6.3.1 Cosmetic Check (Display Off) in Non-Active Area (Continued)

Check Item	Classification	Criteria
Panel Crack	Minor	Any crack is not allowable.
Copper Exposed (Even Pin or Film)	Minor	Not Allowable by Naked Eye Inspection
Film or Trace Damage	Minor	**************************************
Terminal Lead Prober Mark	Acceptable	
Glue or Contamination on Pin (Couldn't Be Removed by Alcohol)	Minor	
Ink Marking on Back Side of panel (Exclude on Film)	Acceptable	Ignore for Any

WiseChip Semiconductor Inc.

6.3.2 Cosmetic Check (Display Off) in Active Area

It is recommended to execute in clear room environment (class 10k) if actual in necessary.

Check Item	Classification	Criteria
	Classification	Citteria
Any Dirt & Scratch on Polarizer's Protective Film	Acceptable	Ignore for not Affect the Polarizer
Scratches, Fiber, Line-Shape Defect (On Polarizer)	Minor	$W \le 0.1$ Ignore $W > 0.1, L \le 2$ $n \le 1$ $L > 2$ $n = 0$
Dirt, Black Spot, Foreign Material, (On Polarizer)	Minor	$\Phi \le 0.1$ Ignore $0.1 < \Phi \le 0.25$ $n \le 1$ $0.25 < \Phi$ $n = 0$
Dent, Bubbles, White spot (Any Transparent Spot on Polarizer)	Minor	Φ ≤ 0.5 → Ignore if no Influence on Display $0.5 < Φ$ $n = 0$
Fingerprint, Flow Mark (On Polarizer)	Minor	Not Allowable

- * Protective film should not be tear off when cosmetic check.
- ** Definition of W & L & Φ (Unit: mm): Φ = (a + b) / 2

WiseChip Semiconductor Inc.

6.3.3 Pattern Check (Display On) in Active Area

Check Item	Classification	Criteria
No Display	Major	
Missing Line	Major	
Pixel Short	Major	
Darker Pixel	Major	
Wrong Display	Major	
Un-uniform	Major	

WiseChip Semiconductor Inc.

7. Package Specifications

Item		Quantity	
Module		270 per Primary Box	
Holding Trays	(A)	15	per Primary Box
Total Trays	(B)	16	per Primary Box (Including 1 Empty Tray)
Primary Box	(C)	1~4	per Carton (4 as Major / Maximum)

WiseChip Semiconductor Inc.

8. Precautions When Using These OEL Display Modules

8.1 Handling Precautions

- 1) Since the display panel is being made of glass, do not apply mechanical impacts such us dropping from a high position.
- 2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- 3) If pressure is applied to the display surface or its neighborhood of the OEL display module, the cell structure may be damaged and be careful not to apply pressure to these sections.
- 4) The polarizer covering the surface of the OEL display module is soft and easily scratched. Please be careful when handling the OEL display module.
- 5) When the surface of the polarizer of the OEL display module has soil, clean the surface. It takes advantage of by using following adhesion tape.
 - * Scotch Mending Tape No. 810 or an equivalent

Never try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol, since the surface of the polarizer will become cloudy.

Also, pay attention that the following liquid and solvent may spoil the polarizer:

- * Water
- * Ketone
- * Aromatic Solvents
- 6) Hold OEL display module very carefully when placing OEL display module into the system housing. Do not apply excessive stress or pressure to OEL display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

- 7) Do not apply stress to the driver IC and the surrounding molded sections.
- 8) Do not disassemble nor modify the OEL display module.
- 9) Do not apply input signals while the logic power is off.
- 10) Pay sufficient attention to the working environments when handing OEL display modules to prevent occurrence of element breakage accidents by static electricity.
 - * Be sure to make human body grounding when handling OEL display modules.
 - * Be sure to ground tools to use or assembly such as soldering irons.
 - * To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
 - * Protective film is being applied to the surface of the display panel of the OEL display module.

 Be careful since static electricity may be generated when exfoliating the protective film.
- 11) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OEL display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5).
- 12) If electric current is applied when the OEL display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful to avoid the above.

8.2 Storage Precautions

 When storing OEL display modules, put them in static electricity preventive bags avoiding exposure to direct sun light nor to lights of fluorescent lamps. and, also, avoiding high temperature and high

humidity environment or low temperature (less than 0°C) environments. (We recommend you to store these modules in the packaged state when they were shipped from WiseChip Semiconductor

- At that time, be careful not to let water drops adhere to the packages or bags nor let dewing occur with them.
- 2) If electric current is applied when water drops are adhering to the surface of the OEL display module, when the OEL display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful about the above.

8.3 Designing Precautions

- 1) The absolute maximum ratings are the ratings which cannot be exceeded for OEL display module, and if these values are exceeded, panel damage may be happen.
- 2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the V_{IL} and V_{IH} specifications and, at the same time, to make the signal line cable as short as possible.
- 3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (V_{DD}). (Recommend value: 0.5A)
- 4) Pay sufficient attention to avoid occurrence of mutual noise interference with the neighboring devices.
- 5) As for EMI, take necessary measures on the equipment side basically.
- 6) When fastening the OEL display module, fasten the external plastic housing section.
- 7) If power supply to the OEL display module is forcibly shut down by such errors as taking out the main battery while the OEL display panel is in operation, we cannot guarantee the quality of this OEL display module.
- 8) The electric potential to be connected to the rear face of the IC chip should be as follows: SSD1309 * Connection (contact) to any other potential than the above may lead to rupture of the IC.

8.4 Precautions when disposing of the OEL display modules

Request the qualified companies to handle industrial wastes when disposing of the OEL display modules. Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.

8.5 Other Precautions

- 1) When an OEL display module is operated for a long of time with fixed pattern may remain as an after image or slight contrast deviation may occur.
 - Nonetheless, if the operation is interrupted and left unused for a while, normal state can be restored. Also, there will be no problem in the reliability of the module.
- 2) To protect OEL display modules from performance drops by static electricity rapture, etc., do not touch the following sections whenever possible while handling the OEL display modules.
 - * Pins and electrodes
 - * Pattern layouts such as the FPC
- 3) With this OEL display module, the OEL driver is being exposed. Generally speaking, semiconductor elements change their characteristics when light is radiated according to the principle of the solar battery. Consequently, if this OEL driver is exposed to light, malfunctioning may occur.
 - * Design the product and installation method so that the OEL driver may be shielded from light in actual usage.
 - * Design the product and installation method so that the OEL driver may be shielded from light during the inspection processes.
- 4) Although this OEL display module stores the operation state data by the commands and the indication data, when excessive external noise, etc. enters into the module, the internal status may be changed. It therefore is necessary to take appropriate measures to suppress noise generation or to protect from influences of noise on the system design.
- 5) We recommend you to construct its software to make periodical refreshment of the operation

WiseChip Semiconductor Inc.

statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.

Warranty:

The warranty period shall last twelve (12) months from the date of delivery. Buyer shall be completed to assemble all the processes within the effective twelve (12) months. WiseChip Semiconductor Inc. shall be liable for replacing any products which contain defective material or process which do not conform to the product specification, applicable drawings and specifications during the warranty period. All products must be preserved, handled and appearance to permit efficient handling during warranty period. The warranty coverage would be exclusive while the returned goods are out of the terms above.

Notice:

No part of this material may be reproduces or duplicated in any form or by any means without the written permission of WiseChip Semiconductor Inc. WiseChip Semiconductor Inc. reserves the right to make changes to this material without notice. WiseChip Semiconductor Inc. does not assume any liability of any kind arising out of any inaccuracies contained in this material or due to its application or use in any product or circuit and, further, there is no representation that this material is applicable to products requiring high level reliability, such as, medical products. Moreover, no license to any intellectual property rights is granted by implication or otherwise, and there is no representation or warranty that anything made in accordance with this material will be free from any patent or copyright infringement of a third party. This material or portions thereof may contain technology or the subject relating to strategic products under the control of Foreign Exchange and Foreign Trade Law of Taiwan and may require an export license from the Ministry of International Trade and Industry or other approval from another government agency.
